What is claimed is:

- 1. A substantially purified polypeptide comprising an amino acid sequence selected from the group consisting of SEQ ID NO:1, SEQ ID NO:3, SEQ ID NO:5, SEQ ID NO:7, a fragment of SEQ ID NO:1, a fragment of SEQ ID NO:3, a fragment of SEQ ID NO:5, and a fragment of SEQ ID NO:7.
- 2. A substantially purified valiant having at least 90% amino acid identity to the amino acid sequence of claim 1.
 - 3. An isolated and purified polynucleotide encoding the polypeptide of claim 1.
- 4. An isolated and purified polynucleotide variant having at least 90% polynucleotide sequence identity to the polynucleotide of claim 3.
- 5. An isolated and purified polynucleotide which hybridizes under stringent conditions to the polynucleotide of claim 3.
- 6. An isolated and purified polynucleotide having a sequence which is complementary to the polynucleotide sequence of claim 3.
- 7. An isolated and purified polynucleotide comprising a polynucleotide sequence selected from the group consisting of SEQ ID NO:2, SEQ ID NO:4, SEQ ID NO:6, SEQ ID NO:8, a fragment of SEQ ID NO:2, a fragment of SEQ ID NO:4, a fragment of SEQ ID NO:6, and a fragment of SEQ ID NO:8.
- 8. An isolated and purified polynucleotide variant having at least 90% polynucleotide sequence identity to the polynucleotide of claim 7.
 - 9. An isolated and purified polynucleotide having a sequence which is

claim 3.

10.

11. A host cell comprising the expression vector of claim 10.

10

- selected from the group consisting of SEQ ID NO:1, SEQ ID NO:3, SEQ ID NO:5, SEQ ID NO:7, a fragment of SEQ ID NO:1, a fragment of SEQ ID NO:3, a fragment of SEQ ID NO:5, and a fragment of SEQ ID\NO:1//, the method comprising the steps of:
 - culturing the bost cell of claim 11 under conditions suitable for the a) expression of the polypeptide; and

12. A method for producing a polypeptide comprising the amino acid sequence

An expression vector comprising at least a fragment of the polynucleotide of

recovering the polypeptide from the host cell culture. b)

15

13. A pharmaceutical composition comprising the polypeptide of claim 1 in conjunction with a suitable pharmaceutical carrier.

20

A purified antibody which specifically binds to the polypeptide of claim 1. 14.

15.

A purified antagonist of the polypeptide of claim 1. 16.

A purified agonist of the polypeptide of claim 1.

25

A method for treating or preventing a disorder associated with increased or 17. decreased apoptosis, the method comprising administering to a subject in need of such treatment an effective amount of the pharmaceutical composition of claim 13.

30

18. A method for treating or preventing a disorder associated with increased or decreased apoptosis, the method comprising administering to a subject in need of such

10

treatment an effective amount of the antagonist of claim 16.

- 19. A method for detecting a polynucleotide encoding the polypeptide comprising the amino acid sequence selected from the group consisting of SEQ ID NO:1, SEQ ID NO:3, SEQ ID NO:5, SEQ ID NO:7, a fragment of SEQ ID NO:1, a fragment of SEQ ID NO:3, a fragment of SEQ ID NO:5, and a fragment of SEQ ID NO:7 in a biological sample, the method comprising the steps of:
 - (a) hybridizing the polynucleotide of claim 6 to at least one of the nucleic acids in the biological sample, thereby forming a hybridization complex; and
 - (b) detecting the hybridization complex, wherein the presence of the hybridization complex correlates with the presence of the polynucleotide encoding the polypeptide in the biological sample.
- 20. The method of claim 19 wherein the nucleic acids of the biological sample are amplified by the polymerase chain reaction prior to the hybridizing step.
